Technical data sheet

Fibre concrete spacers for lattice girders

Application:
MAX FRANK AU fibre concrete spacers and lattice girders are used for combined floor slabs and for steel fibre concrete with welded wire mesh.

Quality control:
The fibre concrete spacer fulfils the criteria of DIN 1045, WU guidelines and the requirements defined in the DBV instruction sheet.

Handling:
The upper reinforcement is installed together with a specifically load-adapted lattice girder and protected against tilting. The lower reinforcement can additionally be laid on the fibre concrete spacers. Thus, only one MAX FRANK fibre concrete spacer type allows for installation of all applications, i.e. with and without lattice girder, with and without upper and lower reinforcement and at the same time this spacer ensures the required concrete cover.

Instructions for laying MAX FRANK lattice girders in floor slabs:

A: Installation with upper reinforcement

A1: The lattice girders are clamped into the fibre concrete spacer (3 pieces per girder)

B: Installation with upper and lower reinforcement

B1: Lower reinforcement either

a) The fibre concrete spacer is screwed in between the bars (only possible for certain mesh types)

b) A rebar is placed into the middle recess

Attention:
Always put on the lower rebar of the welded wire mesh.

A2: Place upper reinforcement mat.

B2: The lattice girders are clamped into the spacer

A3: Observe maximum installation distance between lattice girders and fibre concrete spacers

B3: Observe maximum laying distance. Put on upper reinforcement.
