

Technical Data Sheet

Trennfit

Formwork oil for all types of formwork

The concrete release agent **Trennfit** is the right product for all formwork types and areas of application. An excellent release effect can be guaranteed.

Product				
Description	Trennfit is a ready-to-use, physically and chemically acting concrete release agent based on mineral oil, free of solvents and silicone.			
	Its chemical functionality is based on a reaction of calcium hydroxide and aluminium hydroxide of the concrete and conventionally physically due to its water-repellent properties. This facilitates the sliding of air and water bubbles during concreting, which counteracts blowhole formation. In addition, concrete adhesion to the formwork is strongly reduced, which ensures easy demoulding and prevents concrete residues from sticking to the formwork. This protects the formwork and diminishes the cleaning effort for the formwork.			
Usage	Trennfit is recommended for all concrete structures, except exposed concrete, also for later coating of the concrete surfaces or plaster and stucco work.			
	Trennfit is suitable for all formwork types (board formwork, coated formwork panels, plastic formwork, steel formwork, etc.).			
Characteristics / advantages	 Excellent release effect and best adhesion of subsequent coatings and plasters to the concrete 			
advantages	 no chalking of the concrete surface when used as intended 			
	 Complies with DBV guidelines on release agents 			
Test Reports				
Approvals / Standards	Not required			

yellow-ish liquid				
• can: 30 l				
barrel: 200 I				
frost-resistant, down to -30°C				
Form:	liquid			
Colour:	yellow-ish			
Odour:	low odour			
Kinematic viscosity:	approx. 7,5 mm ² /s at 40°C			
Density:	approx. 0,86 g/ccm at 15°C			
Basis:	Napthenic, paraffinic mineral oils, containing additives			
Solubility:	insoluble in water			
Shelf life:	1 year in closed original recipient			
WGK: (Water hazard class)	1, i.e. slightly hazardous to water			
Trennfit is ready for use and must not be diluted. Formwork surfaces must be clean and dry.				
Trennfit is applied thinly and evenly covering with the MAX FRANK special sprayer. Application with a brush, cloth or similar is also possible, but the consumption quantities and labour costs are considerably higher. Please note the puddles of excess release agent and lack of release agent due to excessively absorbent formwork must be avoided.

MAX FRANK Group

Environment / Sustainability	The company MAX FRANK GmbH & Co. KG has implemented a certified environmental management system since July 2022.		
Custamasmy	Please dispose of and recycle the packaging in accordance with the applicable legal regulations.		
Ecological quality	Concrete release agents that are used in the construction of concrete building components are classified within the DGNB system in the area "Ecological quality".		
	An assessment is carried out in quality levels depending on the GISCODES. The higher the quality level, the more positive the influence on a high degree of fulfilment in this category.		
	The designation Giscode stands for "Hazardous Substance Information System Code" and was developed by the "Berufsgenossenschaften der Bauwirtschaft (BG Bau)". It is a labelling system in which products with comparable health hazards are grouped together.		

Quality levels for formwork oils/concrete release agents

GISCODE	Quality level 1	Quality level 2	Quality level 3	Quality level 4	Product group
BTM 01					Concrete emulsions, non-labelled
BTM 05					Concrete release emulsions, containing preservatives
BTM 10	Trennfit Pure	Trennfit Pure	Trennfit Pure		Concrete release agent, non- labelled
BTM 15	Trennfit Pure	Trennfit Pure			Concrete release agent emulsions, allergy hazard due to preservatives
BTM 20	Trennfit Trennfit Super Trennfit Pure				Concrete release agent, low viscosity
