

Dechant administration building

Weismain

© dechant hoch- und ingenieurbau gmbh

Exposed fibre-reinforced concrete cones form a design element in the construction company Dechant's new administration building.

The construction company dechant hoch- und ingenieurbau gmbh in Weismain in Upper Franconia has over 130 years of experience in the construction industry. The innovative company stands for the highest quality in construction and is a leading expert in exposed concrete.

In addition to prestigious projects like the German Bundestag, the company also demonstrates its expertise in the execution of high-quality exposed concrete in its newly constructed administration building. The staircase of the imposing building is in exposed concrete class 4 and was concreted in-situ. This class corresponds to the highest quality requirement for exposed concrete.

For the conical recesses of the exposed concrete walls, the client chose MAX FRANK exposed concrete cones made of fibre-reinforced concrete. Sealing cones provide for homogeneous, durable and aesthetically appealing concrete surfaces. MAX FRANK exposed concrete cones stand out above all for their precise form and quality. They are produced in different sizes and colours.

Type of building:

Clients and Developers:

dechant hoch- und ingenieurbau gmbH, Weismain
