Egcbobox® thermally insulated cantilevered connectors were used in the Fregata residential complex project in Gdansk (Poland).

The Fregata residential complex project in Gdansk / Gdansk used Egcbobox® balcony connections. The balcony slabs were partially prepared in the precast plant and then installed with the cantilever connectors on the building site. More than 250 cantilever connectors were delivered in total.

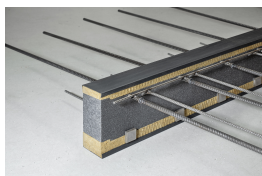

The Egcbobox® system, which has been approved since 1997, acts to prevent thermal bridges between buildings and projecting components.
