The "Palais an der Oper", the former Residenzpost on Munich's Maximilianstraße, has been renovated and rebuilt as an exclusive residential and commercial building.

In addition to spacers, Stremaform® formwork elements, Coupler screw connections, Tubbox® column formers and the Fratec® special formwork were supplied with this project.

Fratec® is the forming solution for creating a variety of expressive concrete shapes. At the "Palais an der Oper", Fratec® was used outdoors as cornice formwork for the roof. MAX FRANK was involved at the planning phase and was selected due to the uncomplicated handling of the ready-to-install special formwork.

Advantages of Fratec® cornice formwork:

- Wall cornice can be realized in a concreting process
- Cornice moulding is supplied with factory coating
- with integrated drip profile for outdoor use

Tubbox® column formers were used for the project's eight meter high circular concrete columns.

Type of building:

Residential- and buisnesshouse

Distributor:

Froschmeier GmbH & Co.KG
