In the center of Bucharest the project developer Vastint started a construction project, which comprises three buildings.

MAX FRANK supplied different types of Stremaform® formwork elements, as well as Fradiflex® metal water stop for in-situ concrete and fibre concrete spacers to Timpuri Noi Square, Bucharest. The Stremaform® and Fradiflex® product lines gave the technical solution which met the requirements of the project.

The building provides working, leisure and living functions, integrated into a mixed-use environment – modern, class A office complex, retail spaces & plaza, residential garden community. With a BREEAM Excellent certification, design stage, the office development is designed in a distinctive way, with a particular accent on green solutions & energy efficiency, emphasizing quality by modern simplicity and natural stone.

As these characteristics fit perfectly to MAX FRANK´s values, there the company is proud of being part of such an innovative, future-oriented und sustainable project. Apart from this, MAX FRANK realized another project with Vastint, the so-called Business Garden Bucharest, a complex of offices and gardens. For more information about this project, follow this link.
