In order to provide thermal insulation in the residential buildings of the settlement Szafarnia in Gdansk, thermal break balcony connectors Egco-box® were used.

The aesthetic, modern residential complex Szafarnia is beautifully situated on the Motława River and in the heart of Gdańsk's Old Town. The building complex was built according to the latest technologies.

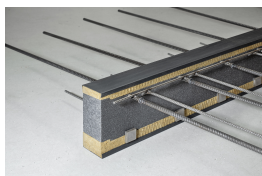

In order to avoid thermal bridges in the monolithically manufactured balconies, thermal break balcony connectors Egco-box® were used. The static connection element Egco-box® separates an external component and an internal component thermally.
